Creating a website for the company using WIX
- Client relationship and project requirements extraction.
- UI/UX design for the Website
- Managing CMS databases and blog functionality.
- Custom code development using Velo.
- SEO setup and deployment management.

📁 PROJECTS

JobIT (Back-End) 🔗
Server-side REST API for account and job application process management
A comprehensive server-side application for account system management allowing the user to sign up and sign in, data encryption to encrypt users' sensitive data, JWT for user authentication, and CRUD operations to manage each user's job-applying process.
(JavaScript, NodeJS, ExpressJS, MongoDB, JWT, BcryptJS)

E-commerce API (Back-End) 🔗
Server-side REST API for E-commerce website products
A server-side application for an e-commerce web application allowing the user to view all the products, search for a product, filter the product using company names or prices while sorting using the price or the name, allowing pagination to view the products in a group of 10 products on each page.
(JavaScript, NodeJS, ExpressJS, MongoDB, Mongoose)

Gericht (Front-End) 🔗
Landing page for a gourmet restaurant
A responsive restaurant landing page built with React, showcasing my Abilities in front-end web development. This project translates UI/UX designs into a functional website, seamlessly blending interactivity and elegance in user interfaces.
(HTML5, CSS, JavaScript, ReactjS)
